

IN THE CLAIMS

Claims 1-10 (Canceled).

11 (Previously Presented). A system comprising:

a processor;

a storage coupled to said processor;

a video controller coupled to said processor; and

a packetization device coupled to said video controller to independently packetize at least two moving picture video streams in different frame rates for transmission thereof to a display device without converting frame rates of said moving picture video streams to a common frame rate.

12 (Previously Presented). The system of claim 11 including a modulation device to modulate and transport independently packetized streams.

13 (Previously Presented). The system of claim 11 wherein each of said video streams has a different frame rate and is packetized to be de-packetized at the different frame rate in the display device.

Claims 14-28 (Canceled).
